HOW CAN I HELP?

It costs $800/day to run the clinic.

You can pledge to the on-going expenses of the clinic. We do not have enough pledged gifts to pay for operating our clinic but we continue to expand our services and trust that people like you will help, and you do.

You can help us raise funds to equip our third clinic building including a kitchen for nutrition trainings, and to modify existing buildings.

You can come and volunteer. Help us learn more and see patients. We can use PAs, nurses, gynecologists, doctors, dentists, and hygienists, but professionals have to be approved by Ministry of Health, an 8-week documentation approval process (for documentation that must be filled out correctly - we can help).

You can collect medicines and equipment and supplies for the clinic. We are able to give more comprehensive care with these donations. The same documentation approval process applies for donations (see above). See our website for needs:

YES! I WANT TO HELP WITH MEDICAL NEEDS IN NICARAGUA …

□ I pledge $___________ monthly towards the on-going costs of the clinic
□ Enclosed please find $___________ as a tax-deductible contribution.

Online giving: Makes it easy to give monthly or occasionally

PUBLIC HEALTH OUTREACH

We have on staff a Health Promoter who organizes 30 lay health promoters who then provide first aid kits and nebulizers from many of their homes. In 2018 they helped over 6,500 people. They provide education for the community and identify needs that the community wishes to have addressed.

We have groups for: 1st time pregnant mothers; mothers with infants; mothers with toddlers; preteen / teenage girls (to prevent teen pregnancy); the LGBT community; boys; parents with asthmatic children; and patients with chronic conditions.

CARE FOR THE YOUNGEST AND THE OLDEST

We have a program that reaches the elderly in their homes. We also have a program where new mothers and their infants are accompanied by clinic staff and volunteer promoters through their pregnancy, birthing classes, and the first year of the child’s life (weighing, measuring, and monitoring the infants).

Almost 70% of our pediatrician’s patients are 5 years old or younger. Our medical staff and volunteers provide home visits to the elderly, infants, and patients at risk.

MEDICAL EXAMS

Exams are provided by both Nicaraguan doctors and international volunteer medical providers. In addition to acute care we provide services to patients with chronic conditions (e.g. hypertension, asthma, diabetes, etc.) which involve monthly appointments with doctors, medications, educational meetings and support groups.

WOMEN’S CARE

We continue to provide prenatal care, PAPs, and family planning, even though our ob/gyn resigned due to personal health issues. Our doctors write orders for lab tests that are examined in our own lab.

PEOPLE’S LABORATORY

Lab tests are done by our part-time technician and by an outside pathologist. After receiving the results, our medical personnel write prescriptions, which our pharmacy fills.

ULTRASOUNDS

A full-time radiologist is on staff, and provides much needed ultrasounds in Ciudad Sandino, a city with a population around 200,000. Our old machine broke and is irreparable, but we hope to get a newer one in 2019. We also provide EKG services.
